                                                                                                                                                                                                                  RESULT 2
                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to a method of treating a mammal for a condition CC associated with undesired cell proliferation such as cancer or CC carcinoma. The method involves administering a composition comprising CC A proliferation inducing Ligand Receptor (APRII-R) also referred as CC interaction between APRII and its cognate receptor(s). This method is CC useful for treating undesired cell proliferation with as cancer or CC carcinoma e.g. human lung carcinoma, colon carcinoma, breast carcinoma, CC prostate carcinoma, and other carcinomas whose proliferation is modulated by APRII. It is also useful for treating autoimmune diseases (Grave's CC disease, systemic lupus erythematosus-SLE); hypertension, cardiovascular CC diseases, renal disorders, B-cell lympho-proliferative disorders immunosuppressive diseases, organ transplantation, inflammation and CC altering an immune response involving a signalling pathway between CC altering an immune response involving a signalling pathway between CC also referred as BCMA or BCM protein, Fc region of human immunoglobulin CC (1gG) and a signal sequence from murine Ig kappa cDNA.
                                                                                                                                                                                                                                                                                                                                Matches 40;
                                                                                                                                                                                                                                                                                                                                                                Query Match

CC as BCMA) protein, or a BAFF-R fusion protein as an agent for the TWF (tumour necrosis factor) family, acting as an immunorgulatory cagent, and also plays a role in the development of hypertension and CC related disorders. BAFF-R, fusion proteins containing it, and BAFF-R-C specific antibodies can be used for inhibiting B-cell growth, dendritic cell-induced B-cell growth and maturation, and immunoglobulin production, and in the treatment of autoimmune disorders. B-cell lymphoproliferative disorders, hypertension and renal disorders. The BAFF-R proteins may also used in the treatment of immunosuppressive disorders and HIV cinfection, and in patients undergoing organ transplantation. The BAFF-R groteins or BAFF-R specific antibodies may be used for treating, cupy testing or altering an immune response involving a signalling pathway between BAFF-R and BAFF, thereby inhibiting inflammation. Since BAFF-R cupy systemic lupus crythematosus, autoimmune haemolytic anaemia, cupy autoimpune disorders and inherited B-cell carcinomas, leukaemia, rapidly progressive glomerulonephritis, and lymphomas. Nucleic acide encoding the sutoimmune disorders and inherited B-cell-associated disorders. The progressive glomerulonephritis, and lymphomas. Nucleic acide encoding autoimmune disorders and inherited B-cell-associated disorders. The comprising a mouse lig6-kappa signal sequence, residues 1-153 cof human BAFF-R and a human Ig6 Fc sequence, residues 1-153
                                                                                                                        Matches

                                                                                                                                                                       cc activator and intracellular CAML interactor) and/or B cell maturation compresses administering partner for APRIL (G70, a tumour necrosis factor-TNF family ligand), having the consensus region of TACI, BCMA, or the TACI/ family ligand), having the consensus region of TACI, BCMA, or the TACI/ CC family ligand). The method is useful for inhibiting activity of TACI or BCMA. The method is useful for inhibiting activity of TACI cand/or BCMA in a mammal which is useful for treating B-cell or T-cell lymphoproliferative disorders, one or more solid tumours such as lung, canteagonists are useful for treating inflammation and immune function comparists are useful for treating inflammation and immune function comparists are useful for treating inflammation and immune function comparists, respiratory allergic disease (asthma, hypersensitivity lung disease), drug and insect sting allergy, inflammatory bowel disease (C cohn's disease, dolitis), scleroderma, autoimmune disease (multiple collerosis, rheumatoid arthritis, systemic lupus erythematosus), fungal, batterial, protozoal and viral infections (HIV), atherosclerosis, cancer with leucocyte infiltration of the skin or organs. The present sequence is human BCMA protein-immunoglobulin Fc region fusion protein.

                                                  The invention relates to a method for inhibiting TACI (transmembrane cc activator and intracellular CAML interactor) and/or B cell maturation coprotein (BCMA) activity in a mammal. The method comprises administering crossific binding partner for APRIL (G70, a tumour necrosis factor-TNF family ligand), having the consensus region of TACI, BCMA, or the TACI/CC ECMA extracellular consensus sequence, but not the extracellular region of TACI or BCMA. The method is useful for inhibiting activity of TACI CC and/or BCMA in a mammal which is useful for treating B-cell or T-cell CC lymphoproliferative disorders, one or more solid tumours such as lung, CC gastrointestinal, pancreatic or prostate tumour. APRIL, BCMA and TACI CC antagonists are useful for treating inflammation and immune function CC diseases such as diarrhoea, psoriasis, allergies, pneumonia, atopic CC dermatitis, respiratory allergic disease (asthma, hypersensitivity lung CC (Crohn's disease, colitis), scleroderma, autoimune disease (multiple CC (Srohn's disease, colitis), scleroderma, autoimune disease (multiple CC bacterial, protozoal and viral infections (HIV), atherosclerosis, cancer with leucocyte infiltration of the skin or organs. The present sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               12-MAY-2000; 2000US-204039P.

                                                           protein (BCMA) activity in a manmal. The method comprises administering the specific binding partner for APRIL (G70, a tumour necrosis factor-TNF family ligand), having the consensus region of TACI, BCMA, or the TACI/ BCMA extracellular consensus sequence, but not the extracellular region of TACI or BCMA. The method is useful for inhibiting activity of TACI conformation of TACI or BCMA. The method is useful for treating B-cell or T-cell conformation of TACI or BCMA in a manmal which is useful for treating B-cell or T-cell conformation of the strangellular region of TACI or BCMA in a manmal which is useful for treating B-cell or T-cell conformation of the strangellular region of TACI or TaCI or

                               CC protein (BCMA) activity in a mammal. The method comprises administering CC a specific binding partner for APRIL (G70, a tumour necrosis factor-TNF CC family ligand), having the consensus region of TACI. BCMA, or the TACI/CC BCMA extracellular consensus sequence, but not the extracellular region CC of TACI or BCMA. The method is useful for inhibiting activity of TACI CC and/or BCMA in a mammal which is useful for inhibiting activity of TACI CC and/or BCMA in a mammal which is useful for treating B-cell or T-cell CC lymphoproliferative disorders, one or more solid tumours such as lung, CC gastrointestinal, pancreatic or prostate tumour. APRIL, BCMA and TACI CC diseases such as diarrhoea, psoriasis, allergies, pneumonia, atopic CC diseases such as diarrhoea, psoriasis, allergies, pneumonia, atopic CC dermatitis, respiratory allergic disease (asthma, hypersensitivity lung CC disease), drug and insect sting allergy, inflammatory bowel disease (Crohn's disease, colitis), scleroderma, autoimmune disease (multiple colerosis, rheumatoid arthritis, systemic lupus crythematosus), fungal, CC bacterial, protozoal and viral infections (HIV), atherosclerosis, cancer with leucocyte infiltration of the skin or organs. The present sequence co is human BCMA cysteine-rich extracellular region.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              12-MAY-2000;

                      protein (BCMA) activity in a mammal. The method comprises administering a specific binding partner for APRIL (G70, a tumour necrosis factor-TNF family ligand), having the consensus region of TACI, BCMA, or the TACI/BCMA extracellular consensus sequence, but not the extracellular region of TACI or BCMA. The method is useful for inhibiting activity of TACI and/or BCMA in a mammal which is useful for treating B-cell or T-cell lymphoproliferative disorders, one or more solid tumours such as lung,
              gastrointestinal,
                                                                                                                                 The invention relates to a method for inhibiting TACI (transmembrane activator and intracellular CAML interactor) and/or B cell maturation
                                                                                                                                                                               Disclosure;
                                                                                                                                                                                                           administering
family ligand
                                                                                                                                                                                                                      Inhibiting activity of B cell maturation protein and/or transmembrane activator and intracellular cyclophilin ligand interactor, by administering a bimding partner for APRIL, a tumor necrosis factor
                                                                                                                                                                                                                                                                                      WPI; 2002-066686/0

                   The present sequence represents a BCMA (not defined) polypeptide. BCMA is a necrosis factor (NF)-kB activator. The method of the invention is used to identify compounds which modulate BCMA activity (and thus NF-kB activity). The specification describes a method of identifying a polypeptide which increases gene expression from a promoter. The method involves contacting a library of with a cell which expresses a recombinant anti-cell death gene and a reporter gene operably linked to the promoter, and then determining whether the expression of the reporter gene is altered as a result of contact with library. The method is useful for identifying polypeptides which increase or decrease gene expression from a promoter. The BCMA polypeptide or nucleic acid are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               dermatitis, respiratory allergic disease (asthma, hypersensitivity lung disease), drug and insect sting allergy, inflammatory bowel disease (Crohn's disease, colitis), sclerosis, untoimmune disease (multiple sclerosis, rheumatoid arthritis, systemic lupus erythematosus), fungal, bacterial, protozoal and viral infections (HIV), atherosclerosis, cancer with leucocyte infiltration of the skin or organs. The present sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Identifying a modulator of gene expression for drug designing, by contacting a compound library with a cell expressing an anti-cell gene and reporter gene, and determining alteration in reporter gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    BCMA; necrosis factor-kB activator; NF-kB; gene expression; cancer; anti-cell death gene; apoptosis; viral infection; inflammatory response; rheumatoid arthritis; inflammatory bowel disease; septic shock.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                  expression

The present sequence represents a human BCMA protein, a B cell protein related to transmembrane activator and CAML-interractor (TACI) receptor. TACI is a tumour necrosis factor (TNP) receptor. The extracellular domains of BR43x2 (an isoform of TACI), TACI or BCMA (a related B cell protein) receptor contain a cysteine rich domain, and are used for inhibiting ztnf4 activity. Ztnf4 is a TNP ligand. They may also be used for inhibiting stnf4 activity. Ztnf4 is a TNP ligand engagement associated with activated or resting B lymphocytes, effector T-cells, or with antibody production. The antibody production is associated with an autoimmune disease selected from systemic lupus erythematosus, myasthenia gravis, multiple sclerosis and rheumatoid arthritis. The ztnf4 activity and BR43x2, TACI or BCMA receptor-ligand engagement is associated with

           The invention relates to methods of using one or more agonists or antagonists to modulate the activity of the members of TNF (tumous necrosis factor) especially TALL-1, ARRIL and TNF receptor (TNFR) e.g. TACI or BCMA. The method is useful for treating pathological conditions or diseases associated with increased TALL-1 and APRIL expression or activity. TALL-1 and APRIL antagonists are used to block the interaction between APRIL and TALL-1 with TACI or BCMA. They are useful for treating a mammal suffering from cancer such as leukaemia, lymphoma, myeloma, cancers of lung and colon and autoimmune diseases e.g. rheumatoid arthritis, multiple sclerosis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     asthma, bronchitis, emphysema, end stage remained properties, renal glomerulonephritis, vasculitis, nephritis, pyelonephritis, renal neoplasms, multiple myelomas, lymphomas, light chain neuropathy, multiple myelomas, lymphomas, light chain neuropathy, and a moderating immune response, immunosuppression, graft

                   The invention relates to a method of treating a mammal for a condition associated with undesired cell proliferation such as cancer or carcinoma. The method involves administering a composition comprising A Proliferation Inducing Ligand Receptor (APRIL-R) also referred as a cell maturation procein (BCM or BCMA) antagonist that antagonises the interaction between APRIL and its cognate receptor(s). This method is useful for treating undesired cell proliferation such as cancer or carcinoma e.g. human lung carcinoma, colon carcinoma, breast carcinoma, prostate carcinoma, and other carcinomas whose proliferation is modulated by APRIL. It is also useful for treating autoimmune diseases (grave's disease, systemic lupus erythematosus-SLE) hypertension, cardiovascular immunosuppressive diseases, organ transplantation, inflammation and human immunodeficiency virus (HTV), and for treating, suppressing or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Human; A Proliferation Inducing Ligand Receptor; APRIL-R; cytostatic; gene therapy; cancer; nephrotropic; renal disorder; autoimmune disease; carcinoma; lung; colon; breast; prostate; Graver et sease; hypertension; systemic lupus erythematosus; SLE; inflammation; cardiovascular disease; B-cell lympho-proliferative disorder; BCM; immunosuppressive disease; organ transplantation; HIV; human immunodeficiency virus; TNF;

as BCMA) protein, or a BAFF-R fusion protein as an agent for the treatment of a variety of immune-related disorders. BAFF-R is a member of the TNF (tumour necrosis factor) family, acting as an immunoregulatory agent, and also plays a role in the development of hypertension and related disorders. BAFF-R, fusion proteins containing it, and BAFF-R-specific antibodies can be used for inhibiting B-cell growth, dendritic cell-induced B-cell growth and maturation, and immunoglobulin production, and in the treatment of autoimmune disorders, B-cell lymphoproliterative disorders, hypertension and renal disorders. The BAFF-R proteins may also
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            17-AUG-1999;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        be used in the treatment of immunosuppressive disorders and HIV infection, and in patients undergoing organ transplantation. The BAFF-R proteins or BAFF-R specific antibodies may be used for treating, suppressing or altering an immune response involving a signalling pathway between BAFF-R and BAFF, thereby inhibiting inflammation. Since BAFF-R inhibites B-cell growth and maturation it is useful for treating diseases such as systemic lupus erythematosus, autoimmune haemolytic anaemia, crave's disease, multiple myeloma, B-cell carcinomas, leukaemia, rapidly progressive glomerulonephritis, and lymphomas. Nucleic acids encoding human BAFF-R may be used in gene therapy to treat tumours, lymphomas, autoimmune disorders and inherited B-cell-associated disorders. The
                                                                                                                                                                                        Shu
The present invention relates to Tumour necrosis factor (TNF) and ApoL-related Leucocyte expressed Ligand 1 (TALL-1) nucleic acid

The TALL-1 protein and its corresponding nucleic acid sequence are also
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 immunosuppressive; dermatological; antiinflammatory; antidiabe neuroprotective; antirheumatic; antiarthritic; antiasthmatic; nephrotropic; hypotensive; gene therapy; B lymphocyte; tumour;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      useful in diagnostic assays.

The present sequence is a human B cell maturation factor (BCMA) protein. It is the receptor for TALL-1 protein. BCMA gene is located on chromosome 16. In human tissues, BCMA is expressed by spleen and lymph nodes but not by brain, muscle, heart, lung, kipancreas, testis and placenta. BCMA mRNA is absent in the pro-Blymphocyte stage but its expression increases with B lymphocyte
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     maturation factor) to regulate monocyte, macrophage and B lymphocyte mediated immune responses. TALL-1 protein is useful for identifying compounds that regulate B lymphocyte proliferation. It is also useful treating B lymphocyte associated autoimmune disorders like rheumatoid treating B lymphocyte associated autoimmune disorders like rheumatoid

The present invention describes a human tumour necrosis ractor receptor. CC designated Ztnfr12 (I) (I) has cytostatic, immunosuppressive, CC dermatological, arthinflammatory, neuroprotective, antidiabetic, CC antirheumatic, antiarthritic, antiasthmatic, nephrotropic and hypotensive activities, and can be used in gene therapy. (I) can be used for CC inhibiting, in a mammal, the activity of a ligand that binds Ztnfr12 (e.g. ZTNF4), for treating disorders and diseases associated with B CC lymphocytes, activated B lymphocytes or resting B lymphocytes, and for cc inhibiting the proliferation of tumour cells. (I) is useful for treating GC autoimmune disorders such as systemic lupus crythematosus, myasthenia CC autoimmune disorders such as systemic lupus crythematosus, myasthenia gravis, multiple sclerosis, insulin dependent diabetes mellitus, asthma, cr remail disease such as glomerulonephritis, vasculitis, chronic lymphoid CC neoplasms, multiple myelonms, lymphomas, light chain neuropathy, or cl leukaemia, nephritis, and pyelonephritis, vasculitis, chronic lymphoid CC neoplasms, multiple myelonms, lymphomas, light chain neuropathy, or amyloidosis, hypertension, large vessel disease, graft versus host CC disease, graft rejection and Crohn's disease, graft versus host CC disease, graft to modulating the immune system, for regulating B cell responses and cytokine production, and for modulating T and B cell communication. The present sequence represents a protein which is given in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         RESULT 15

the TNF (tumour necrosis factor) family, acting as an immunoregulatory CC agent, and also plays a role in the development of hypertension and crelated disorders. BAFF-R, fusion proteins containing it, and BAFF-R-CC specific antibodies can be used for inhibiting B-cell growth, dendritic cand in the treatment of autoimmune disorders, B-cell lymphoproliferative clisorders, hypertension and renal disorders. B-cell lymphoproliferative clisorders, hypertension and renal disorders of the BAFF-R proteins may also be used in the treatment of immunosuppressive disorders and HIV infection, and in patients undergoing organ transplantation. The BAFF-R correction, and in patients undergoing organ transplantation. The BAFF-R correction, and in patients undergoing organ transplantation. The BAFF-R corrections or BAFF-R specific antibodies may be used for treating, corrections or BAFF-R and BAFF, thereby inhibiting inflammation. Since BAFF-R corrections b-cell growth and maturation it is useful for treating diseases such as systemic lugus erythematosus, autoimmune haemolytic anaemia, corrects disease, multiple myeloma, B-cell carcinomas, leukaemia, rapidly progressive glomerulonephritis, and lymphomas. Nucleic acids encoding
                                             present sequence represents a human BAFF-R protein sequence as encoded by plasmid PJST535. However, this BAFF-R protein sequence is 27 amino acids shorter than that given in anscence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Inhibiting dendritic cell-induced B-cell growth, maturation and B-cell lympho-proliferative disorder by administering BAFF-receptor polypeptide, chimeric molecule comprising receptor or anti-BAFF-R antibody homolog
                                                                                                                            human BAFF-R may be used in gene therapy to treat tumours, lymphomas, autoimmune disorders and inherited B-cell-associated disorders. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to the use of a BAFF receptor (BAFF-R, also known as BCMA) protein, or a BAFF-R fusion protein as an agent for the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    WPI; 2001-202866/20.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     treatment
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Example 1; Fig 3; 59pp; English.
